

NRT Rework Campaign

Goal of the process :

- Make the NRT backlog clearer :
 - We will have only **ONE** test by function
 - All the tests will be **UNIQUE**, no more duplicate or empty tests
 - All the functions will be covered completely
- Make it easier to prepare NRT campaigns :
 - We will have to take into account only the NRT that has been **modified during the actual period** (24x, 25x,...)
 - All the test will be **up to date**, so no needs to check the tests individually
 - The test execution will be **easier** for all team members
- Make the ramp up more fluid for new team members :
 - All the functions will be **comprehensively described** by a single and complete test
 - The new team members will be able to **search easily a topic in an organised repository**
- Give real support to dev teams :
 - **Unitary test** will be easier and more complete
 - They will be able to test **all OOTB functions** in one single test by topic

As Is :

Non regression	0 (593)
ACA	0 (163)
ADS	1 (281)
AH	0 (107)
Baseline Performance Metrics	13 (13)
COTS	6 (6)
Ultrafan	1 (1)
CatiaV5	1 (1)
FCAS	0 (18)
SPADES	3 (3)

- Nearly 600 tests
 - A lot of duplicates
 - Nearly 20% are obsolete or empty
-

ADS	1 (281)
Data creation	12 (65)
CAD Authoring	6 (70)
Fastener	23 (34)
Search	2 (2)
SSL check	4 (4)
Import	4 (4)
Settings	16 (16)
Instance and Reference Lifecycle	20 (25)
Drawing	5 (5)
Electrical	6 (15)
DDeV	6 (11)
Logical and Functional	2 (2)
Data Management	5 (5)
Assembly Design	0 (10)
Widget	0 (7)
PnO	1 (1)
Launcher - CATEnv	1 (1)
Catalogue	1 (1)
Standard Part Authoring	2 (2)

- Some files contains only one old test
- Here in ADS folder we have a folder Data Creation, but also one Drawing, Fastener and Electrical, which make the search of information difficult
- Some functions are not covered at all

Subjects which contains no tests :

To Be :

Non Regression V2	0 (14)
Data Creation	0 (1)
ADS	0 (1)
Eurodrone	0 (1)
FCAS	0 (0)
ACA	0 (0)
AH	0 (0)
CAD Authoring	0 (5)
ADS	0 (5)
ACA	0 (0)
AH	0 (0)
AHCS01	0 (0)
H175	0 (0)
Authoring Context	0 (0)
Collaborative Lifecycle	0 (0)
Engineering Rules Capture	0 (0)
Engineering IP Controle	0 (1)
Tools	0 (1)
Part Design	0 (1)
Generative Shape Design	0 (0)
Assembly Design	0 (0)
DDEV CadAuthoring	0 (0)
Interference Check	0 (0)

- We will have only one test by function
 - Tests will be sort by Applications (OOTB + Custo) / BU /Programs and then function in order to find easily the information
 - Same structure for each BU
 - Each feature will be modeled and documented in a dedicated Confluence page.
-

Lifecycle of a NRT test :

- A NRT test assigned to a function will stay unique. Each new story about the concerned topic will have information to the actual test without creating a duplicate.
- For NRT Campaign, instead of taking all tests in the backlog, we will have to take only tests that had been modified during the actual period (24x, 25x,...), clone it to make it unique and make sure it will not be modified later by new stories, and file it with the concerned execution tests.
- Only new functionalities will lead to the creation of a new NRT test.

Structure of a NRT test :

- First, we will do specific test for data creation, that will be linked on every other tests depending on the needs. We will have two types of data creation tests :
 - One by specific data, to explain how, where and why we create them.
 - A second more global, to make complete product structure.
 - Once we put the data creation part, we will had prerequisites :
 - For example, if we work on new revision, we need to have our data in Frozen. So we will link the Promote/Demote test by specifying the part which concerned the Freezing data.
 - Then, we write the test while making sure all parts of the process are classified with head titles, to make easier the research from a linked test.
-

**Thanks for watching,
Do you have any questions ?**
